Confirmation of Course Participation

Mr Latif GUNGOR

participated in our training from 12.11.2022 to 13.12.2022
and completed it successfully.

Programming in Javascript - Module 2

Upon successful completion of this course, participants have the knowledge and skills to use functions and complex data structures to solve programming problems in Javascript. The course consisted of 56 lectures and included the following main topics:

- Analyzing problems and developing algorithmic solutions using functions and data structures.
- Creating data structures that are most appropriate for the problem-solving domain by using/combining javascript arrays and objects.
- Understand the general concepts of sorting and searching algorithms.
- Apply TDD (test-driven development) practices in their work.
- Build and modularise an application using ECMAScript modules in the context of NodeJS & NPM.
